

WEICON Easy-Mix HT 180 Epoxy Adhesive

High temperature resistance | steady | shock- and impact resistant

WEICON Easy-Mix HT 180 is a 2-component adhesive based on epoxy resin with high temperature resistance up to +180 °C (+356 °F); short-term up to +230 °C (+446 °F). The adhesive is highly viscous and stable which also makes it suitable for vertical applications. It is impact- and shock-resistant, has a long pot life, cures at room temperature and is machinable after curing. The adhesive is particularly suitable for the bonding of composite materials and metal and can be spot-welded while curing. Easy-Mix HT 180 can also be used on plastics, ceramics, glass, stone or wood and is suitable for adhesions where larger tolerances have to be bridged. Due to special fillers, it is possible to achieve a non-varying and reliable adhesive joint of at least 0.20 - 0.25 mm. The high temperature resistance enables the bonding of components, which are thermo-coated (powder-coated) after curing.

Characteristics

Base	Epoxy resin, mineral-filled	
Texture	pasty, gap-filling	
Colour	black	
Minimum shelf life	at room temperature	24 mon.

Processing

Processing temperature	+10 °C to +40 °C	
Curing temperature	+10 °C - +50 °C	
Mixing ratio by weight	2:1	
Density of the mixture	1,1 g/cm³	
Gap bridging up to max.	4 mm	

Curing

Pot life	at 20 °C, 10 ml batch	60 min.
Handling strength	(35 % strength)	120 min.
Working strength after	(50 % strength)	4 h
Final strength	(100 % strength)	24 h
Shrinkage		0,3 %

Surface Pre-Treatment

Clean and dry bonding surfaces are essential for flawless adhesive bonding (e.g. cleaning and degreasing with WEICON Surface Cleaner).

Application

WEICON Easy-Mix products can be processed straight from the double cartridge by means of the included static mixer. Dismiss the first 5 cm of the adhesive bead. The adhesive is applied to just one side. The specified pot life refers to a material batch of 10 ml at room temperature. Larger batch quantities will result in faster curing. Higher temperatures also reduce the pot life and curing time. (General rule: every increase by +10 °C above room temperature results in a decrease of the pot life and curing time by half). Temperatures below +16 °C increase the pot life and curing time significantly. From approx. +5 °C and below, no reaction takes place.

Storage

WEICON epoxy adhesives should be stored in a dry place at room temperature. Unopened containers can be stored at temperatures from +18 °C to +25 °C. Protect from direct sunlight. Failure to observe these storage instructions will reduce the shelf life to 6 months. Epoxy resins generally tend to crystallise at temperatures below +5 °C. This effect is increased by large temperature fluctuations, e.g. during transport especially in the winter months. This has a negative impact on processing, curing and technical data, can, however, be reversed by heating the product (up to max. +50 °C, no open flame). In WEICON epoxy adhesives, crystallisation is reduced by the careful choice and combination of base resins (bisphenol A and F).
